

# BETTER BUSINESS, BRIGHTER SAVINGS

A Sonepar Company

According to ENERGY STAR®, lighting makes up 17% of all electricity consumed in U.S. commercial buildings. Using energy efficient LED lighting and controls can help you better manage your business' energy use.

FirstEnergy's Ohio Commercial Lighting Program offers support from technical experts to help you better understand the lighting needs of your business as well as financial incentives to offset upfront costs.

## Segments of Energy Savings:

- Occupancy and daylighting controls
- Networked lighting controls
- LED lamps
- LED linear lights
- Internal and external LED fixtures
- LED refrigerator case lighting
- LED exit signs
- LED channel signage
- Custom lighting

Lighting incentives are available for both existing facilities and new construction projects. New lighting equipment must be ENERGY STAR rated or listed by the Design Lights Consortium (DLC) to be eligible for incentives. Pre-approval is required before purchasing or installing equipment.

## Schedule a Lighting Audit
